

Balance of Power

**Experience the energy transition.
Do not just hear about it.**

A facilitated simulation workshop in which participants build generation portfolios, bid into a simplified Australian electricity market, and navigate the competing pressures of price, reliability, emissions and investment.

One shared market. Four competing objectives.

Build. Bid. Debrief.

01

BUILD YOUR PORTFOLIO

Choose a mix of generation, storage and flexibility.

02

COMPETE IN THE MARKET

Respond to changing demand, weather and market conditions.

03

LEARN THROUGH DEBRIEF

Compare strategies and connect outcomes to the real transition.

What participants explore

- How market dispatch and pricing shape commercial outcomes
- Why low-cost generation is not always the same as reliable supply
- The role of storage, flexible generation and demand response
- How investment timing and policy settings change strategy
- The tension between individual success and system-wide outcomes

A workshop built for professional learning

Balance of Power creates a shared experience that gives teams a practical language for discussing energy-market mechanics, risk, trade-offs and transition choices.

GRADUATE & INDUCTION

Build an accessible foundation in electricity-market concepts.

PROFESSIONAL DEVELOPMENT

Explore transition trade-offs through active decision-making.

STRATEGY & INNOVATION

Create a common frame for discussing technology and market choices.

COHORTS & EVENTS

Bring an engaging, structured format to industry programmes.

Flexible workshop formats

Introductory demonstration

A concise experience for prospective hosts, leadership teams or events.

Facilitated workshop

Gameplay, guided reflection and a structured group debrief.

Custom session

Adapted framing, emphasis and discussion for a specific audience or purpose.

FOUNDING PILOT PROGRAMME

Help shape the professional offering

GG Advisory is inviting a small number of energy-sector organisations to host an early facilitated workshop tailored to their audience.
