

Primary Care

We have a team of General Physicians that can assist with essential primary care services. Services include wellness and sick visits, chronic illness management, and physicals. Primary Care can be very helpful for those suffering from mental health conditions, and have acute and chronic illnesses that are treated properly.

Psychiatric Medication Management

Our physicians can provide a comprehensive psychiatric evaluation that can grant a pathway forward to develop an extensive treatment plan. A mental evaluation is an assessment intended to analyze emotional, social, or formative conditions to render a diagnosis for treatment. The assessment will investigate numerous perspectives including formative history, medicinal history, family traits, scholastic/work concerns, and emotional and psychological disorders. Every physician has his or her own framework and a definitive determination may not be made in the principal visit. A typical psychiatric evaluation may take 60 to 90 minutes.

After the initial evaluation, a diagnosis will be made and a treatment plan is developed. Once a treatment plan and medication is chosen, there will be a period of monitoring to ensure viability. Our provider will manage the side effects, effectiveness, and patient compliance when introducing a new medication for treatment. Since Psychiatric prescriptions are distinctive from person to person, the appropriateness of medication may change from individual to individual.

About Us

Outreach offers addiction and mental health outpatient clinics across Maryland, New Jersey, Pennsylvania, and Virginia.

We offer substance abuse treatment with experienced behavioral health providers for ongoing recovery treatment. We utilize Suboxone, Vivitrol, and other mental health medications that have been shown to be very effective for treating addiction and mental health disorders.

We treat patients in an outpatient setting so they can continue a normal routine without the dependency on harmful drugs. Patients can respond very quickly with positive results and low risk. Most patients are able to begin a healthy life starting within their first visit.

We Can Help

Outreach can help patients who are looking to immediately subside Opioid or Heroin use, end prescription pain medication use, and patients who may benefit from the pain-relieving symptoms of Suboxone. We have experience assisting individuals who may be chronic relapse patients or patients coming out of an intensive drug treatment program and are looking for a barrier. We gladly offer flexibility for treatment times and locations.
