

WHAT IS BIOMAGNETISM?

Biomagnetism is a revolutionary, scientific and therapeutic approach to wellness practiced in many countries throughout the world.

Biomagnetism heals the body by using pairs of north and south pole magnets, placed upon specific areas of the body identified through muscle testing, to bring the pH (Potential Hydrogen) of the body back to a neutral state. **Once the pH in the body is neutralized, the immune system can function optimally, pain and inflammation will be reduced and the body's innate ability to heal is enhanced.**

BIOMAGNETIC SESSION

A typical Biomagnetic session is 1.5 to 2 hours. You will lay upon a padded table comfortably clothed. Through a test of muscular intelligence reaction (kinesiology) the body shows where the imbalance resides and magnetic pairs are placed. The magnets are small and painless. Once they are in place, we balance your energetic field to release additional blocks that may help your body come back into balance. Most clients say they feel incredibly relaxed and at peace during a session. It is important to hydrate well before and after a session for optimal results.

WHO DISCOVERED BIOMAGNETIC PAIRS?

Biomagnetic pairs were discovered by Dr. Isaac Goiz in Mexico City, Mexico in 1988. Dr. Goiz discovered that by placing a negative and a positive magnet on specific areas of the body, the body will reestablish the natural pH of the body.

Dr. Goiz discovered that microorganisms such as virus, fungi, bacteria and parasites can be kept under control by the body's renewed natural defenses. The pathogens can no longer survive in a healthy pH environment. For example, everyone who has had an aquarium or pool knows of the importance of pH balance in the water. We are no different. Our body is made up of over 60% water and has a very specific pH balance that it needs to maintain if we are to remain healthy.

What is the importance of pH balance?

The pH scale goes from 0 to 14, with 7 being neutral. Below 7 is acidic and above 7 is alkaline. Arterial and venous blood must maintain a slightly alkaline pH: arterial blood pH = 7.41 and venous blood pH = 7.36. Because the normal pH of arterial blood is 7.41, this has given rise to a variety of approaches based on increasing the alkalinity of the tissues, such as a vegetarian diet, the drinking of fresh fruit and vegetable juices, and dietary supplementation with alkaline minerals to maintain body pH. Although these strategies help maintain pH, they may not be enough in today's harsh environment.

Is it possible to recover a healthy metabolic state using Biomagnetism?

Dr Goiz revealed that it is possible to recover a healthy metabolic state through the use of magnetic fields of medium intensity, produced by magnets of 1,000 to 4,000 Gauss, applied in pairs in specific parts of the body called Biomagnetic Pairs (BMP). This approach is a type of biofeedback, where the Biomagnetic Pairs complement each other, leading to homeostasis.

How does Biomagnetism actually work?

By applying these BMP at specific locations of the body, the reestablishment of the proper pH is permitted in that area, and when present, pathogens cannot survive in this pH environment. Cells become healthy and the body starts healing itself. Finally, the healing process occurs when the pH is balanced and reaches its optimal level that determines the well-being of the person, which before the therapy was altered by the presence of pathogenic microorganisms that distorted the levels of acidity and alkalinity (pH) of the organs. This is what sustains the bio-energetic phenomenon.
