Elite ePMF Allocation

Transparent, Sustainable, Accurate, Compliant

Errors and delays in hydrocarbon allocation can lead to serious financial and reputational risks. Elite uses technology and decades of industry experience to provide accurate data that meets regulatory and business needs. This supports timely decision-making and reduces risks inherent to data uncertainty and complex allocation algorithms.

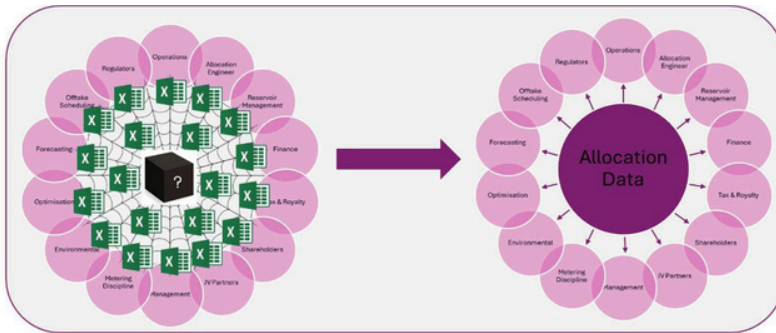

Reduces Risk

- Flexible and tailored to meet all stakeholder requirements. Removes the need for the multitude of uncontrolled excel tools, each increasing the risk of error, that evolve around traditional solutions.
- Frequent seamless upgrades reduce the security risk compared to traditional solutions.

Single Source of Truth

- Views of the data configured to meet all stakeholder needs using transparent, auditable and easy to understand calculations, based on a single source of validated data.

Reduces Cost

- Software As a Service (SAAS) reduces Total Cost of Ownership (TOC).
- Upgrades are frequent, free, seamless, replacing the expensive labour-intensive upgrades required by traditional solutions

Accurate

- Business rules are applied to validate data before using in allocation.
- Those responsible are automatically informed of suspect data, so that data issues can be resolved promptly.

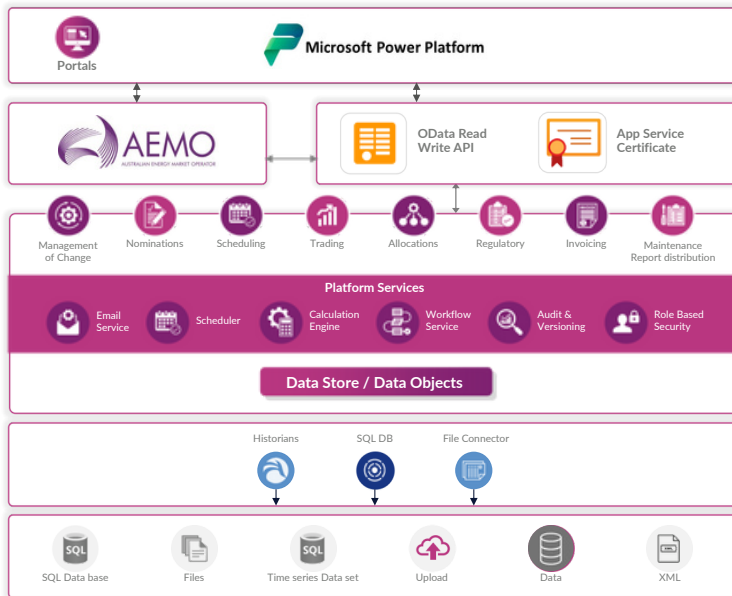

Sustainable

- Enables growth with evolving production systems and assets without external support.
- Using a low-code/ no-code platform, only proficiency in Excel is required to expand functionality.
- Elite's "I do, We do, You do" philosophy ensures that the business function is able to take ownership, reducing dependency on external IT support.

Transparent and Auditable

- Log files provide full visibility and auditability. Anybody with basic Excel skills can review and understand how the calculations are performed using actual data. Replaces traditional "black box" solutions.
- The history of each value is retained, facilitating troubleshooting and auditing.

Technology Enabled

- Led by an SME, our multi-disciplined team of configurators leverage technology to provide a solution with interfaces, data views and reports that meet all stakeholder needs.
- Cloud native solution with >99.9% system availability.

Engineering-Led Tailored Solutions.

- Enabled by decades operational experience; process engineering skills; and expertise in metering and allocation, our team of SMEs design the optimum allocation methodology that minimises uncertainty, is compliant with agreements and meets stakeholder requirements.

Solution Spark Engineering

- Tailors the solution to business drivers and process, commercial agreements, production licenses, regulatory requirements, and optimum allocation algorithms.

Unique Data Model

- Engineering data and reports are retroactively updated with data corrections. Commercial datasets can be locked, and data corrections can be applied as adjustments to the next report to be issued.

Allocation Methods & Reports

- Elite uses the platform's flexibility to configure a solution fit for each client, implementing, in a very transparent manner, any allocation methodology.
- These can be any combination of normal industry practice, and calculations specified in commercial agreements.
- The solution is tailored to meet all stakeholder interface and reporting requirements.
