

Our Care Processes

Here's what your care experience with SknFx will look like – from first contact to full healing.

(1) Referral Received

Referrals are accepted from hospitals, physician offices, home health agencies, skilled nursing facilities, hospice providers, caregivers, and patient self-referrals.

(2) Benefits Verification

Our team verifies insurance coverage and obtains any required authorizations to facilitate timely initiation of care (it may take 24–48 hours).

(3) Patient Contact & Initial Wound Evaluation

Our intake team contacts the patient to schedule the initial wound evaluation. Our goal is to see patients within 24–48 hours after insurance verification and referral acceptance.

(4) Care Coordination

We collaborate with physicians, home health agencies, skilled nursing facilities, hospice teams, and caregivers to ensure continuity of care.

(5) Ongoing Communication

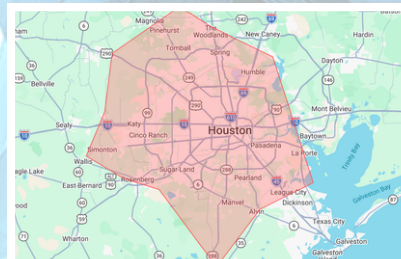

Regular wound updates, progress reports, and treatment recommendations are provided to the referring provider and care team.
